

CCGS *Louis S. St-Laurent*

Measuring 392.7 feet in length, with a displacement of 13,800 tons, the newly-refitted CCGS LOUIS S. ST-LAURENT would become the flagship of the Canadian Coast Guard. The first Canadian surface ship to reach the North Pole, the "Louie" used 5 diesel-electric engines, generating up to 40,000 horsepower, to help the expedition steam to the top of the world.

International co-operation at the top of the world.
