THE REASON WE ALL WENT NORTH???

During our 45 days off the east coast of Greenland, this group of men conducted an extensive study of the sea and ice in that rarely explored part of the Earth. They were ferried by helicopter away from the ship to different points on the ice. There they would collect data on thickness, age, salinity, and depth-charges were dropped to give headaches to the crew.

After coming back to the ship they processed the data with the computer (cassette stereo incognito). This took long arduous hours of work on the part of all hands; and in doing that we still have but one question ... What is a CTD CAST?

Mr. M.L. Welsh, LT. D.F. Duddy, Mr. R.K. Perry, CAPT. R.T. Nelson, Mr. G.R. Giellis, Mr. J.L. Newton, Mr. I.R. Piper,
